

# World Space Week

Dear Parents and Carers,

As this week is World Space Week, the children have been asked to do a space themed homework project.

We are asking each child to make, write, build, imagine or create something to do with space. You could paint or draw a picture, take a photograph of the sky at night, write a poem or a fact file, build a junk model rocket or make a moon buggy, design a space station or bake some space food. The options are endless and there are no rules! We just want you to be as creative as possible.

Science is a subject which allows children to wonder, question, discover and explain about the world around them. World Space Week is an opportunity for the children to explore science in fun and interesting ways.

Please take a photo or video of your project and email it to the office to be shown in class. **Projects are due by Friday 16<sup>th</sup> October.**

Have fun and we look forward to seeing some of your creations!

Mr Cook

Science Lead
